# PRODUCT SPECIFICATIONS

# Hardware

- Functionality
- Components
- Requirements
- Power Specifications

# Software

- Requirements
- User Interface
- Network - Database

# Hardware Functionality:

- \* Our hardware renders its users to communicate safely by encrypting/decrypting the message and the location information. When the user desires to send information, hardware component receives the plain text from the phone, encrypts it and transmits the cipher text to phone.
- \* The communication between encryption device and the smart phone is carried out via Bluetooth.

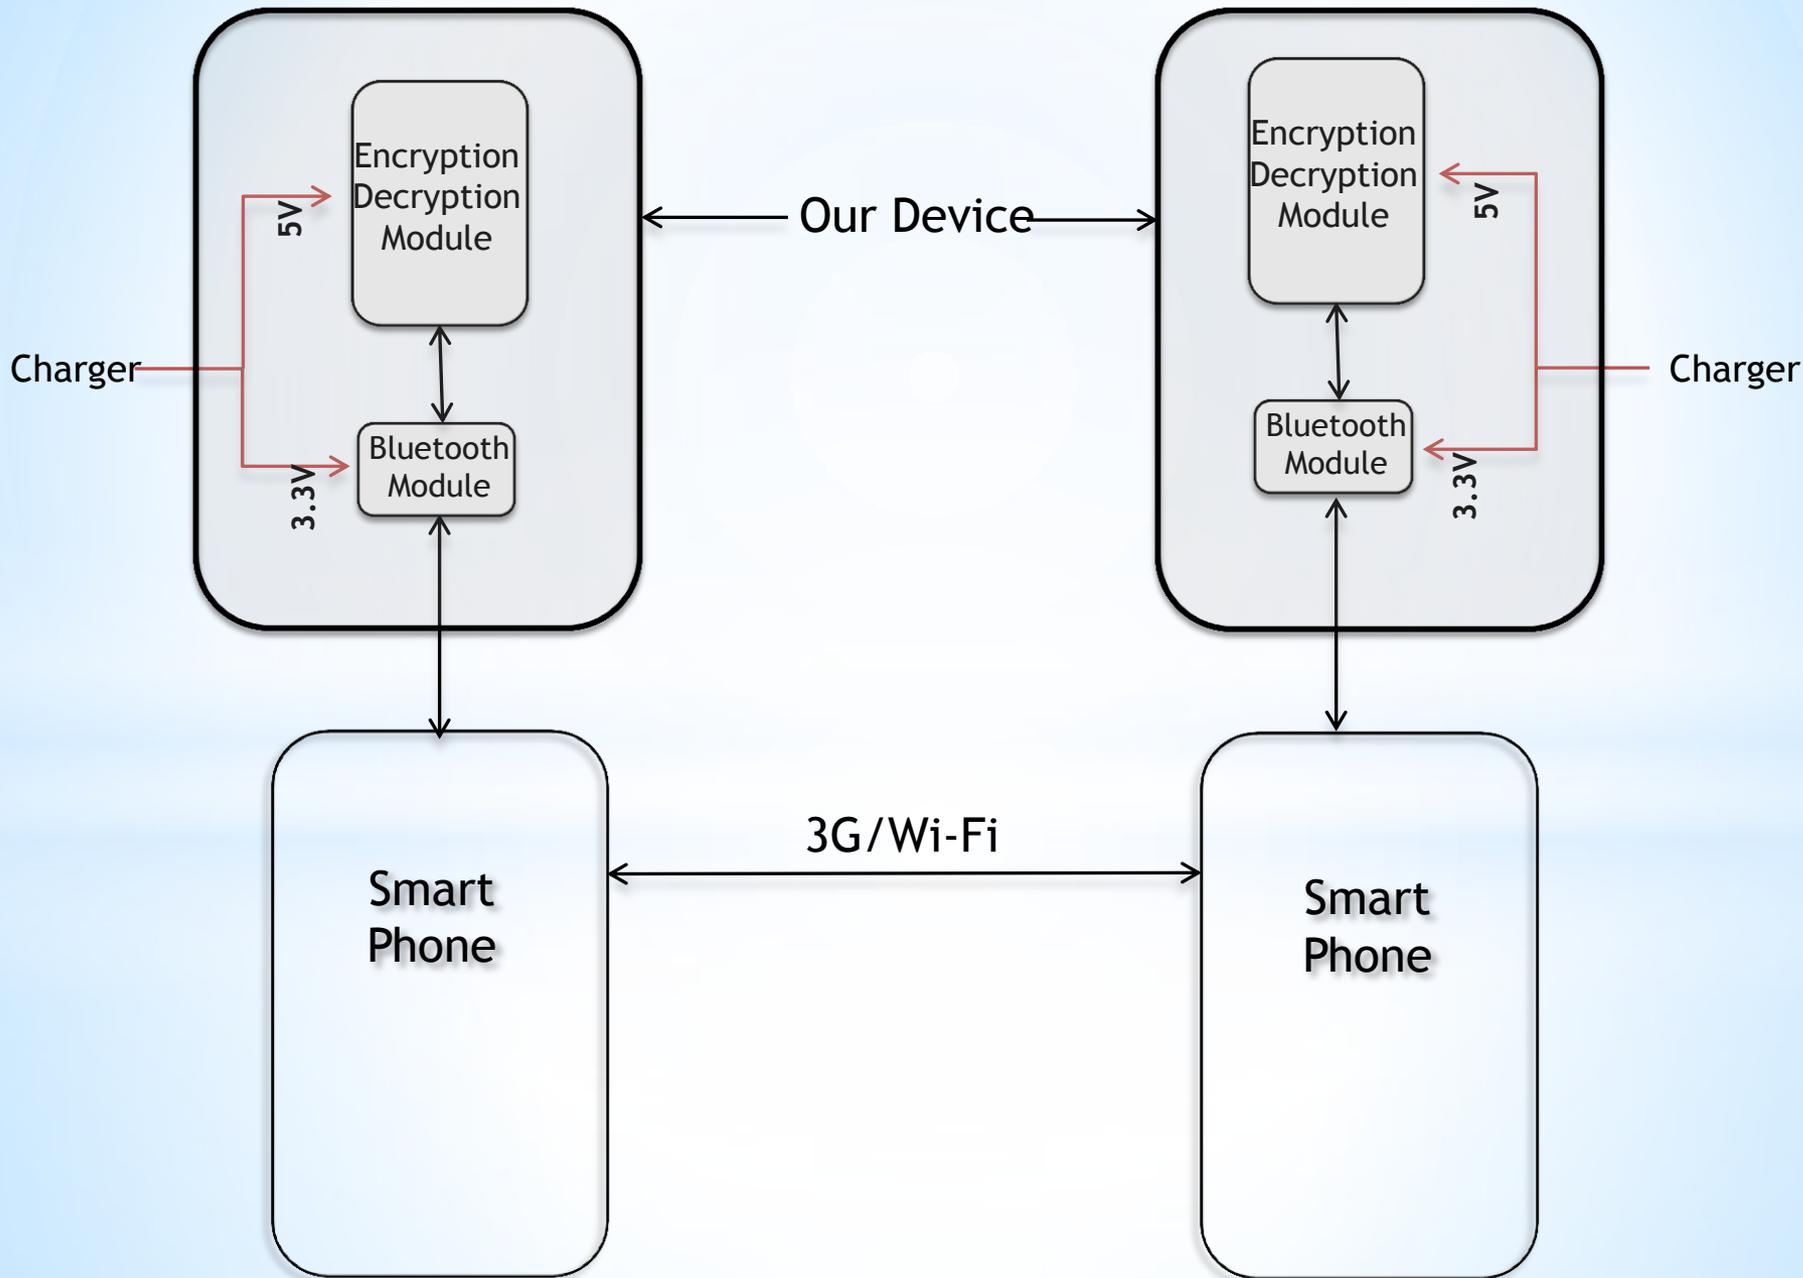

Fig 4:Hardware Block Diagram

# Technical Specifications: Hardware

## \*Hardware Components:

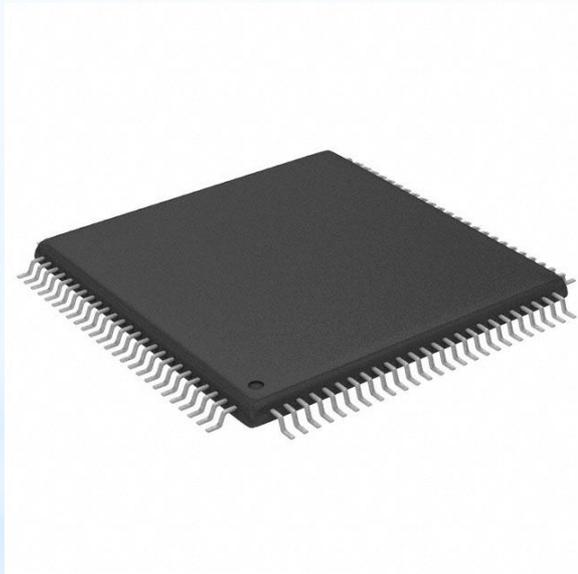

Fig 1: Altera EP1C3T100C8N FPGA Chip

Fig 2: Texas Ins. CC2540 Bluetooth Chip

Fig 3: Texas Ins. CC2540 Mini Bluetooth Development Kit

# Hardware Requirements

- \* We aim to keep the hardware size less than equal to 60mm x 80mm x 20mm for easier transportability.
- \* The weight of the product must be less than 100g
- \* Bluetooth range must be within 20-25 meters
- \* Supply voltage for charging must be between 5V
- \* Battery life must let at least 4.5 hours of continuous use and standby time must be over 80 hours

# Power Specifications

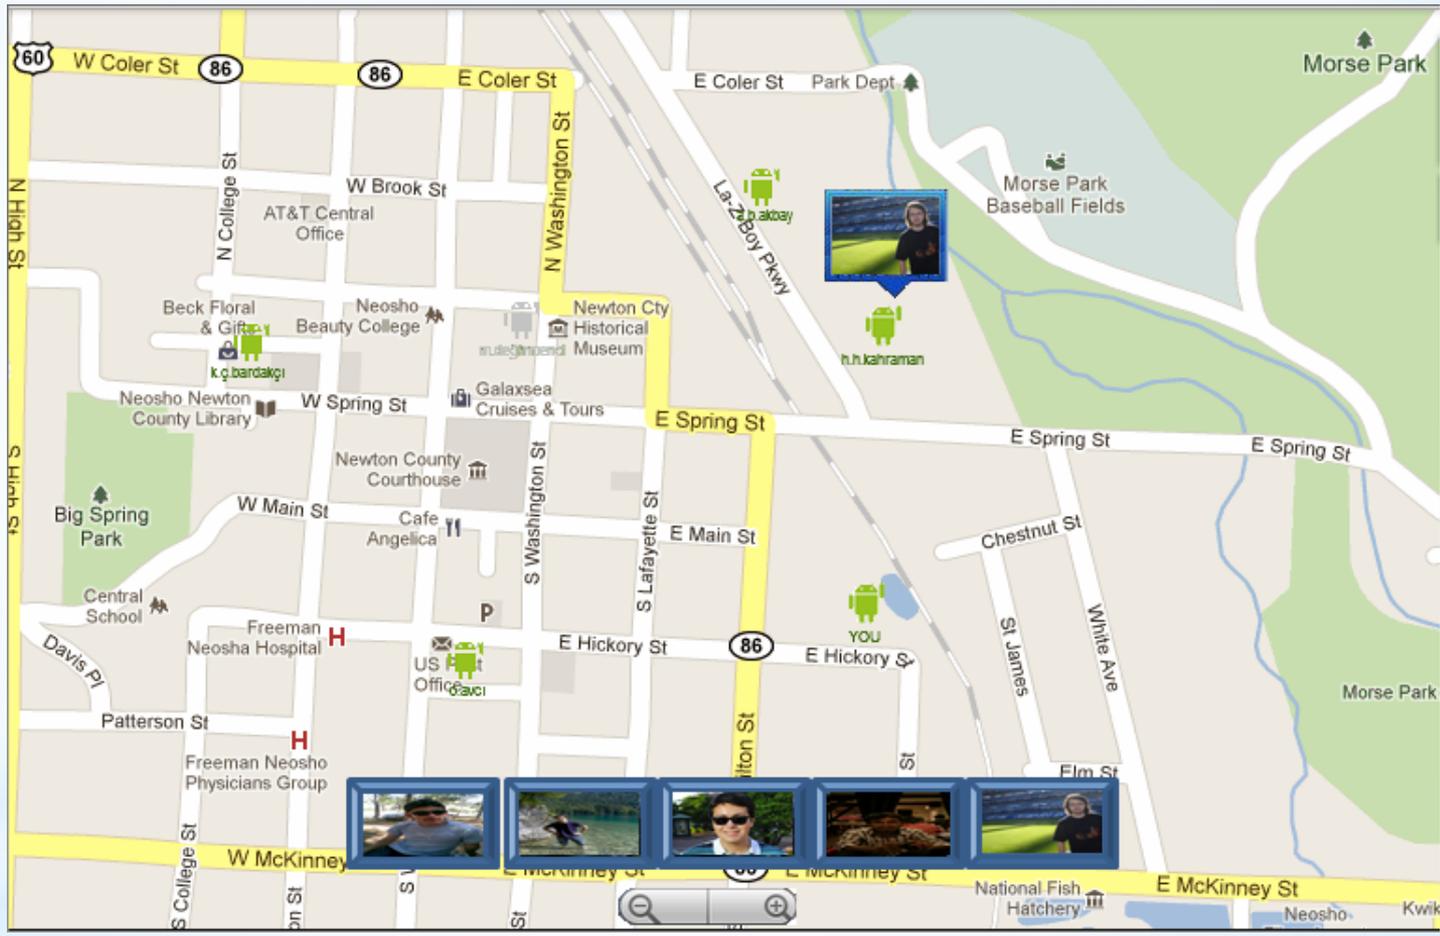

- \*The device power supply requirements include voltage outputs 1.5V to 3.3V and current outputs from tens of milliamps to multiple amperes
- \*The logic device is sensitive to the voltage and current variations. Due to these reasons usage of supply voltage regulator is required. The regulator should be capable of satisfying power supply requirements given above

# Power Specifications

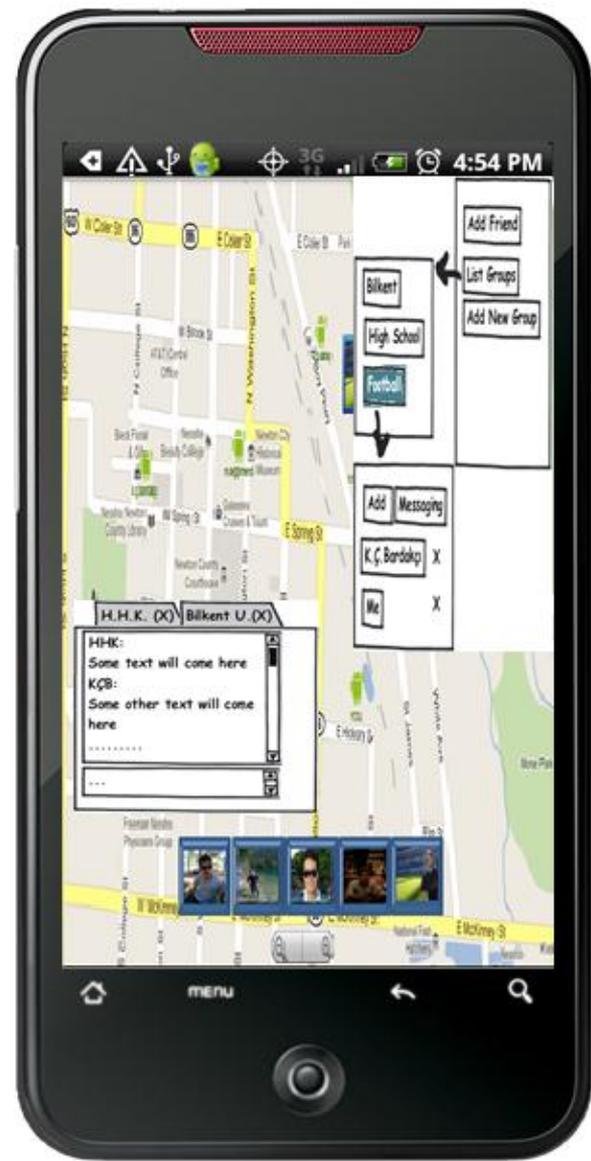

- \*As the power supply voltage, usage of rechargeable batteries which can provide high current outputs above 500mA and nominal voltage output around 5V are required
- \*The supply voltage shall have high energy density of around 1800 - 5000 mAh and low weight which is around 30 - 50g. This satisfies at least 4 hours of continuous usage of the encryption device

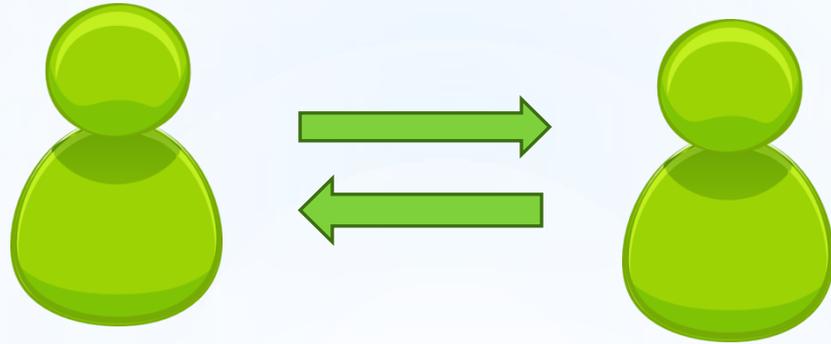

- \* Username-password authentication and authorization
- \* Get the location using GPS
- \* Send the location using SSL network
- \* Evaluate coming location information
- \* Scaling options (starting from 10 meters)
- \* Users' photo, longitude and latitude information -by assuming the user's position as zero point- can be seen when their location is clicked

# SOFTWARE SPECIFICATIONS

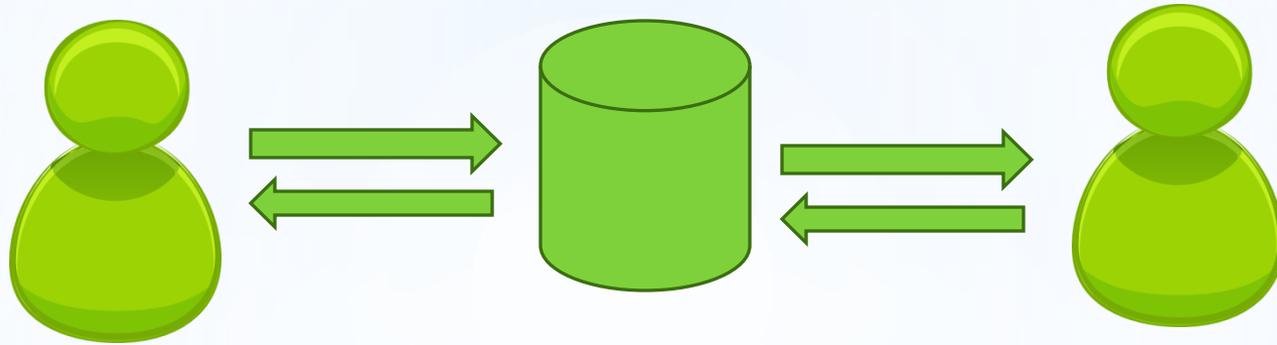

- \* Creating new groups
- \* Send invitations for their groups
- \* Send request to join a group
- \* Messaging and location sharing with separate groups
- \* Online-offline
- \* Bluetooth  Encrypt on phone
- \* Privacy and Location hiding

- \*Public and private key
- \*Messaging between users directly
- \*300 characters

\*Locations sent to DB first

\*Last 10 locations kept in DB

# Competitiveness & Marketing

\* COSTS

\* COMPETITION ANALYSIS OF THE MARKET

## **TARGET MARKET : SMART PHONES ACCESSORIES**

### **CUSTOMER PROFILE :**

- \* GOVERNMENT
- \* CORPORATIONS WHICH CARE SECURITY

### **DISTRIBUTION CHANNEL :**

- \* VIA E-COMMERCE (HARDWARE)
- \* VIA ANDROID MARKET (SOFTWARE)

## COMPETITORS :

### \* SOFTWARE

\* SOS LOCALIZATION - 1.99 \$

\* GPSMS - Free

\* BUDDY BEACON - 2.49 \$

- ONLY LOCATION TRACK
- NO ENCRYPTION
- NO MESSAGING
- CHEAP BUT NOT SECURE

\* HARDWARE

\* ENCRYPTION PORTABLE TELEPHONE RECORDER ( GUANGZHOU ELECTRONIC ) - 148.99 \$

\* ENCRYPTED RECORD OF CONVERSATIONS AND MESSAGES
